# Testing That Finally Keeps Pace

Coverage that builds itself, runs itself, and fixes itself.

[LEARN MORE](#)

With AI coding agents, your team ships code 3x, 5x, or even 10x faster than they were a year ago. Your test suite wasn't built for that speed. Something has to give: will your testing become the bottleneck, or will you ship unverified code to production anyway?

**Active Coverage** closes the gap. Released today, mabl's skills work together continuously to:

- Build tests entirely in the cloud with parallel sessions, so creation scales with your pipeline
- Run at enterprise scale with unlimited concurrency across browsers, devices, and APIs
- Recover coverage automatically when your application changes, with full transparency on every update
- Analyze failures through conversation — ask follow-up questions, get evidence, share reports

No handoffs between tools. No specialist required, just coverage that keeps up.
